$$T = w$$

# 1.2 5.6

$$b = \mathrm{ball}$$
 
$$m = 3620\,\mathrm{kg}$$
 
$$\theta_{T_B,\hat{y}} = 40^\circ$$

(a)

$$T_B = ?$$

$$\cos(\theta) = \frac{m_b g}{T_B}$$

$$T_B = \frac{m_b g}{\cos(\theta)}$$

$$= \frac{3620 \text{ kg} \cdot 10 \text{ m s}^{-2}}{\cos(40^\circ)}$$

$$T_B = 47.255.7 \text{ N}$$

$$T_B = 47.3 \times 10^3 \text{ N}$$

$$T_{A} = ?$$

$$\theta_{T_{B},\hat{x}} = ?$$

$$\theta_{T_{B},\hat{x}} = 90^{\circ} - \theta_{T_{B},\hat{y}}$$

$$= 90^{\circ} - 40^{\circ}$$

$$\theta_{T_{B},\hat{x}} = 50^{\circ}$$

$$\cos(\theta_{T_{B},\hat{x}}) = \frac{T_{B_{x}}}{T_{B}}$$

$$T_{B_{x}} = (T_{B})\cos(\theta_{T_{B},\hat{x}})$$

$$= (47.3 \times 10^{3} \text{ N})\cos(50^{\circ})$$

$$T_{B_{x}} = 30403.9 \text{ N}$$

$$\sum F_{x}^{(b)} = 0$$

$$T_{B_{x}} - T_{A} = 0$$

$$T_{A} = T_{B_{x}}$$

$$T_{A} = 30403.9 \text{ N}$$

$$T_{A} = 30403.9 \text{ N}$$

## $1.3 \quad 5.62$

$$T_{r,p_1} = ?$$
 $T_{w,p_1} = ?$ 
 $w = m_w g$ 
 $T_{p_2,p_1} = ?$ 
 $T_{r,p_2} = ?$ 
 $\vec{F} = ?$ 

Based on the free body diagrams, it can be concluded that

$$T_{r,p_1} = T_{p_2,p_1} = \vec{F} \tag{1}$$

as they share a common rope.

Therefore the forces of  $p_1$  in the  $\hat{y}$  direction can be found as

$$\sum_{t} F_y^{(p_1)} = 0$$

$$T_{r,p_1} + T_{p_2,p_1} - T_{w,p_1} = 0$$

$$T_{w,p_1} = 2T$$

Finding  $T_{p_1,w}$  from the free body diagram of the weight

$$\sum F_y^{\text{(weight)}} = 0$$
$$T_{p_1,w} - w = 0$$
$$T_{p_1,w} = w$$

In order to withhold Newton's third law, the combined tension of  $T_{r,p_1}$  and  $T_{p_2,p_1}$  must equal  $T_{w,p_1}$  (as shown in Equation 1)

$$2T = T_{w,p_1}$$
$$= w$$
$$T = \frac{w}{2}$$

It can therefore be concluded that (according to (1))  $\vec{F}$  must equal T, finding the magnitude in terms of w

$$\vec{F} = T = \frac{w}{2}$$

- 1.4 5.64
- (a)
- (b)

$$m_{\rm ball} = ?$$
  $\theta_{\hat{x}, \rm ramp} = 35.0^{\circ}$   $T_{\rm ramp, ball} = ?$ 

Determine the normal force

$$\begin{split} \cos(\theta) &= \frac{N_{\text{ball}y}}{N_{\text{ball}}} \\ N_{\text{ball}} &= \frac{N_{\text{ball}y}}{\cos(\theta)} \\ \text{as well as: } N_{\text{ball}y} &= N_{\text{ball}}\cos(\theta) \end{split}$$

To find  $N_{\text{ball}y}$ , utilize the forces in the  $\hat{y}$  direction

$$\begin{split} \sum F_y^{\text{(ball)}} &= 0 \\ N_{\text{ball}y} - m_{\text{ball}g} &= 0 \\ N_{\text{ball}y} &= m_{\text{ball}g} \\ N_{\text{ball}} \cos(\theta) &= m_{\text{ball}g} \\ N_{\text{ball}} &= \frac{m_{\text{ball}}g}{\cos(\theta)} \\ &= \frac{m_{\text{ball}}10\,\text{m}\,\text{s}^{-2}}{\cos(35.0^\circ)} \\ N_{\text{ball}} &= (m_{\text{ball}})(12.2\,\text{m}\,\text{s}^{-2}) \\ \hline N_{\text{ball}} &= (m_{\text{ball}})(12.2\,\text{m}\,\text{s}^{-2}) \end{split}$$

(c) Finding the tension in the wire requires finding the forces in  $\hat{x}$  direction

$$\sum F_x^{(\text{ball})} = 0$$
 
$$T_{\text{ramp,ball}} - N_{\text{ball}x} = 0$$

Finding  $N_{\text{ball}x}$ 

$$\sin(\theta) = \frac{N_{\text{ball}x}}{N_{\text{ball}}}$$

$$N_{\text{ball}x} = N_{\text{ball}} \sin(\theta)$$

And using the value in the force equation above

$$T_{\text{ramp,ball}} = N_{\text{ball}} \sin(\theta)$$

$$= (m_{\text{ball}})(12.2 \,\text{m s}^{-2}) \sin(35.0^{\circ})$$

$$T_{\text{ramp,ball}} = (m_{\text{ball}})(7.00 \,\text{m s}^{-2})$$

$$T_{\text{ramp,ball}} = (m_{\text{ball}})(7.00 \,\text{m s}^{-2})$$

## $1.5 \quad 5.79$

(a)

$$N_A=$$
? 
$$N_B=$$
? 
$$N_A=N_B, \mbox{ Newton's Third Law } N=$$
? 
$$m_Ag=1.20 \mbox{ N} \\ m_Bg=3.60 \mbox{ N} \\ \mu_k=0.300 \\ f=\mu_k N \\ \vec{F}=$$
?

In order to find  $\vec{F}$ , the normal force is needed which can be found by observing the forces in the  $\hat{y}$  direction

$$\sum_{} \vec{F}_{\hat{y}}^{(\mathrm{A})} = 0$$
 
$$N_A - m_A g = 0$$
 
$$N_A = m_A g$$

$$\begin{split} \sum \vec{F}_{\hat{y}}^{(\mathrm{B})} &= 0 \\ N - m_B g - N_B &= ? \\ N &= m_B g + N_B \\ &= m_B g + m_A g \\ &= 1.20 \, \mathrm{N} + 3.60 \, \mathrm{N} \\ N &= 4.80 \, \mathrm{N} \end{split}$$

$$f = \mu_k N = (0.300)(4.80 \,\mathrm{N}) = 1.44 \,\mathrm{N}$$

Now finding  $\vec{F}$ 

$$\sum \vec{F}_{\hat{x}}^{(B)} = 0$$
 
$$-\vec{F} + f = 0$$
 
$$\vec{F} = f$$
 
$$= 1.44 \text{ N}$$
 
$$\vec{F} = 1.44 \text{ N}$$

$$\vec{F} = 1.44 \, \mathrm{N}$$

$$N_A=?$$
 $N_B=?$ 
 $N_A=N_B$ 
 $f_A=?$ 
 $f_B=?$ 
 $f_A=f_B$ , Newton's Third Law
 $T_{\mathrm{wall},A}=?$ 
 $m_Ag=1.20\,\mathrm{N}$ 
 $N=?$ 
 $m_Bg=3.60\,\mathrm{N}$ 
 $\vec{F}=?$ 

First determine the forces in the  $\hat{x}$  direction of block A to find tension

$$\sum_{i} \vec{F}_{\hat{x}}^{(A)} = 0$$
 
$$T_{\text{wall},A} - f_A = 0$$
 
$$f_A = T_{\text{wall},A}$$

Similarly to part (a), find  $N_A$  using the  $\hat{y}$  forces of block A

$$\sum_{} \vec{F}_{\hat{y}}^{(A)} = 0$$
 
$$N_A - m_A g = 0$$
 
$$N_A = m_A g$$
 
$$N_A = 1.20 \,\text{N}$$

The friction of block A upon block B can now be calculated, and further utilized through  $f_B$  due to Newton's Third Law

$$f_A = \mu_k N_A = (0.300)(1.20 \,\mathrm{N}) = 0.360 \,\mathrm{N}$$

Find N to aid in finding the friction between the ground and block B

$$\sum_{\hat{y}} \vec{F}_{\hat{y}}^{(B)} = 0$$

$$N - m_B g - N_B = 0$$

$$N = m_B g + N_B$$

$$= 3.60 \,\text{N} + 1.20 \,\text{N}$$

$$N = 4.80 \,\text{N}$$

Solve for the forces in the  $\hat{x}$  direction of block B to finally compute the

pulling force

$$\sum_{\hat{F}_{\hat{x}}} \vec{F}_{\hat{x}}^{(B)} = 0$$

$$f + f_B - \vec{F} = 0$$

$$\vec{F} = f + f_B$$

$$= \mu_k N + 0.360 \text{ N}$$

$$= (0.300)(4.80 \text{ N}) + 0.360 \text{ N}$$

$$\vec{F} = 1.80 \text{ N}$$

$$\vec{F} = 1.80 \text{ N}$$
